JOAN EMANERAME

AI Software Engineering Student

Toronto, Ontario, Canada

[emaneramejoan@gmail.com] | [Github - https://github.com/Joan-Programs] | [https://www.linkedin.com/in/joan-emanerame-08487039a/?isSelfProfile=true]

PROFESSIONAL SUMMARY

AI Software Engineering student with experience in programming, web development, databases, software requirements, and artificial intelligence concepts. Skilled in Java, Python, C#, JavaScript, HTML, CSS, and SQL. Experienced in developing websites and software projects through individual and group coursework. Strong interest in AI application development, software engineering, and building practical technology solutions.

EDUCATION

Centennial College — Progress Campus

Advanced Diploma — Artificial Intelligence Software Engineering

Toronto, Ontario, Canada

Expected Graduation: [2028]

Relevant Coursework:

- Artificial Intelligence Systems Design
- Object-Oriented Programming
- Web Development
- Software Development
- Database Development

- Software Requirements
- Machine Learning

TECHNICAL SKILLS

Programming Languages:

Java, Python, C#, JavaScript, SQL

Web Development:

HTML, CSS, JavaScript, Responsive Web Design, React

Artificial Intelligence & Machine Learning:

Machine Learning, Data Preprocessing, Model Training, Model Evaluation, TensorFlow

Databases:

SQL, Relational Databases, Database Design

Development Tools:

Visual Studio Code, Eclipse, Anaconda, Spyder, Git, GitHub

Software Engineering:

Software Requirements, Object-Oriented Programming, Problem Solving, Critical Thinking, Debugging, Software Design

ACADEMIC & PERSONAL PROJECTS

Weather Application — JavaScript, HTML & CSS

In Progress

Developing a weather application that provides weather information through a web-based interface.

- Designed and developed the application's user interface using HTML and CSS.
- Used JavaScript to implement application functionality.
- Worked with weather data and practiced working with APIs.
- Practiced organizing JavaScript functionality and handling user input.
- Continuously improving the application as part of my web development learning.

Technologies: JavaScript, HTML, CSS

Movie Website — JavaScript, HTML & CSS

Created a basic movie website as part of web development practice.

- Designed the website structure using HTML.
- Styled the interface using CSS.
- Used JavaScript to add interactive functionality.
- Practiced displaying and organizing movie-related information.
- Strengthened understanding of front-end web development.

Technologies: JavaScript, HTML, CSS

Fashion Website — Group Project

Collaborated with a group to develop a fashion-focused website as part of coursework.

- Worked collaboratively with other students to develop the website.
- Contributed to the design and development of the website.
- Applied HTML, CSS, and JavaScript concepts.
- Practiced communicating ideas and dividing development tasks within a team.
- Used GitHub as part of the project's code-sharing and collaboration process.

Technologies: HTML, CSS, JavaScript, GitHub

House Price Prediction — Python & Machine Learning

Developed a machine learning application for predicting house prices using a housing dataset.

- Loaded and prepared a structured dataset for machine learning.
- Performed data preprocessing before model training.
- Trained a machine learning model to predict house prices.
- Evaluated the model using Mean Squared Error and R^2.
- Organized the project into separate components for data loading, preprocessing, model training, evaluation, and prediction.

Technologies: Python, Pandas, Machine Learning, Anaconda

Blind Dog AI Simulation — Python

Developed a simple reflex AI agent that interacts with objects and people in a simulated environment.

- Created Python classes representing people, food, water, a park, and the dog.
- Created objects and assigned locations within the environment.
- Implemented behavior allowing the dog to detect a person.
- Added a barking action when the dog encounters a person.
- Tested the AI agent through multiple simulation steps.
- Applied object-oriented programming concepts to structure the simulation.

Technologies: Python, Object-Oriented Programming, AI Agent Design

Java Singers Application — Java

Developed a Java application to practice object-oriented programming concepts.

- Created a Singers class containing singer information.
- Implemented constructors, setters, and getters.
- Created and worked with objects from the Singers class.
- Practiced encapsulation and class design.
- Created driver code to test the functionality of the class.

Technologies: Java, Eclipse, Object-Oriented Programming

Software Requirements & Analysis

Completed software requirements coursework involving the analysis and planning of software systems.

- Analyzed software problems and identified system requirements.
- Practiced gathering and documenting functional and non-functional requirements.
- Used critical thinking to understand user needs and software objectives.
- Considered how requirements influence software design and development.
- Practiced communicating technical requirements clearly.

Skills: Software Requirements, Critical Thinking, Problem Solving, Software Analysis

COLLABORATION & DEVELOPMENT EXPERIENCE

Through academic projects, developed experience with:

- Individual and group software development
- Website design and development
- Database concepts and SQL
- Software requirements analysis
- Object-oriented programming
- Debugging and problem solving
- GitHub and version control
- Applying programming concepts to practical projects

CAREER INTERESTS

- AI Application Development
- Software Engineering
- Artificial Intelligence

- Machine Learning
- Web Development
- Software Design
- Database Development
- Intelligent Applications
